

Java Full Stack Development

Class Introduction

Course Logistics

- Hours
 - 9am - 5pm CDT
 - June 1 – Jul 3, 2026
 - Lunch is 12-1 CST
 - Two 15 breaks, one mid-morning and one mid-afternoon

Course Materials

- You will be receiving the slides and labs through your training coordinator
- There is also GitHub repository for class materials
 - <https://github.com/ExgnosisClasses/2612-JavaSpring-June-1>
 - This repo is not accessible through your work computer
 - You can access it on you personal device
 - It will have copies of the slides and labs as well as any additional resources and materials relevant to the class
 - Including links to resources for further or remedial study
 - The repository will be freely available for cloning until August 4, 2026

Course Materials

- There is GitHub repository for labs
 - It is just a copy of the labs from the main repository
 - Makes it easier to clone the labs into your virtual lab machine
 - The labs repo will also be available until Aug 4, 2026
 - <https://github.com/ExgnosisClasses/2612-JavaSpring-Labs>

Lab Machines

- Lab machines
 - VMs will be provided for the labs
 - Lab #1 will walk you through how to log on to your VM
 - The VM folder in the repository contains information on your VM id and password
 - You will have access to your VM continuously until the end of the class
 - There will be periodic maintenance done on your VM
 - Primarily check on the status of your VM product licensing and updating it when necessary
 - This will be done on weekends to ensure it doesn't interfere with your use of the VM

Instructor – Rod Davison

- 52 years experience in IT
- 42 years experience in AI
 - Designed and developed AI prototypes
 - NLU, expert systems, machine translation, agents, etc.
 - Research director for AI companies
- Project manager for IT deliveries in the public and private sectors
 - Worked on major IT projects like
 - IT integration for bank mergers
 - Automation of major stock exchanges
 - Industrial automation systems and business automation
 - US and Canadian government IT projects

Instructor – Rod Davison

- Academic background
 - Theoretical math, psychology, anthropology, cognitive science
- Consulting
 - Finance, Defence, Insurance, Government, Fortune 100
- Current areas of development, consulting and research
 - AI alternative to LLMs
 - Business, legal and social impact of AI
 - Legacy systems conversion
 - High security and safe computing
 - Distributed and autonomous systems
 - Biocomputing and alternative computing models

Introductions

- In order for me to ensure the class meets your needs
- Please introduce yourself and tell me:
 - Your professional background and skill set (developer, BA, etc.)
 - Your experience in using Java, Spring and Oracle
 - Your experience with testing and security
 - Any specific goals or objectives for the class

Course Plan

- The first four weeks
 - Lecture and labs Mon - Thur
 - Friday is review, labs and catch-up time
- Fifth week
 - Mon - Tue , normal class schedule
 - Wed - Thur, group capstone work
 - Fri - Group presentations

Course Plan

- Capstone
 - You will be divided into groups later in the course
 - You will be provided with capstone project description
 - This will be in the form of a specification you have to implement
 - A scoring rubric will be provided
 - This should help you guide your design and implementation decisions
 - You will have a working scaffolding
 - This is so you don't have to implement everything from scratch
 - You will be building parts of the scaffolding in your labs
 - The capstone is not an exam to be passed
 - It is an opportunity for you to show off what you have learned
